Venus

What is known as the Red Planet ?

Tap your Answer

Which is the coldest planet in our solar system?

Type your answer

The background of the entire image is a colorful, artistic representation of outer space. In the center is a large, bright yellow sun with a textured surface. Surrounding the sun are several planets of different sizes and colors, including a large reddish-brown planet in the upper right, a blue and white planet in the lower right, and a ringed planet in the lower left. The space is filled with nebulae and star dust, creating a rich, cosmic atmosphere.

What is the smallest planet?

Type your answer

A vibrant space scene featuring a bright yellow sun in the center, surrounded by a ringed planet (likely Saturn) in the bottom left corner. Several other celestial bodies, including moons and smaller planets, are visible in the background against a dark, star-filled sky with colorful nebulae.

Which planet have rings?
